

Checking Microphone and Camera settings on an App

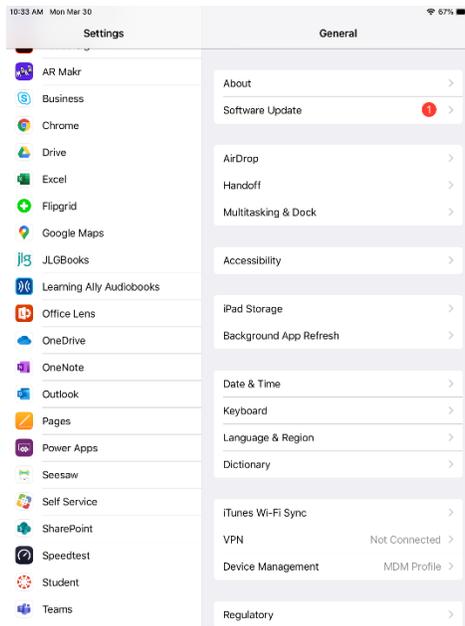

1. When an app is first opened, usually a screen will pop up asking the student to enable the microphone and/or camera for the app to use. The screen may look something like this:

2. Depending on what the first person to use the app selected upon first opening the app, the settings may have the microphone and/or camera enabled or disabled. If the app's microphone and/or camera's settings need to be enabled or the microphone and camera don't work, tap the "settings" icon on the iPad.

3. In settings, scroll down in the left-hand "Settings" column and tap the app in question.

Checking Microphone and Camera settings on an App

4. In this example, the app's settings that we are going to adjust is in the Flipgrid app. Make sure that the iPad is allowing the app to access the device's microphone and camera by selecting the switch next to each option (The switch will turn green when enabled). In the picture below, the microphone and camera are both enabled in the Flipgrid app's settings.
